School characteristics

Data source: the DfE's January school census for 2025, 2024 and 2023, and children in need census for 2024, 2023 and 2022

▼ [Guidance](#)

The chart shows school-level and local area-level information for the last 3 years. For a school that has a sixth form, an additional row will show information relating to Years 12, 13 and, where applicable, 14.

For each measure, text and shading are used to show where the school sits within the national distribution of all schools, or to show the banding of the local area average within the national distribution of all schools. The local averages are based on the DfE spring census of pupils at schools in the same phase. Local area averages are not shown for the school number on roll, location deprivation or stability measures.

Local area is based on the middle-layer super output area (MSOA) in which the school resides. MSOAs comprise between 2,000 and 6,000 households and have a resident population of, generally, between 5,000 and 15,000 people. MSOAs fit within local authorities. The MSOA used in the IDSR for each school will be displayed at the top of this section. For more information about MSOAs, visit [the Office for National Statistics website \(https://www.ons.gov.uk/methodology/geography/ukgeographies/statisticalgeographies\)](https://www.ons.gov.uk/methodology/geography/ukgeographies/statisticalgeographies).

The possible National distribution bandings in this section are:

- Well above average (blue shading)
- Above average
- Close to average
- Below average
- Well below average (orange shading)

The banding shows how the school or local average figure compares with the national figure. If the value is more than 0.5 standard deviations (SDs) above the national rate, it is classed as 'Above average'. If it is more than 0.5 SDs below the national rate, it is classed as 'Below average'. If it is more than one SD above the national rate, it is classed as 'Well above average' and highlighted in blue. If it is more than one SD below the national rate, it is classed as 'Well below average' and highlighted in orange. Otherwise, it is 'Close to average' and shown in grey.

Except for the school location deprivation measure, schools are compared with other schools in the same phase: primary (including middle deemed primary) or secondary (including middle deemed secondary, and all-through schools). Special schools are compared with the national distribution for secondary schools.

FSM6 in this chart refers to the percentage of pupils who are or have been eligible for free school meals and have claimed them during Reception to Year 11 sometime in the last 6 years.

Stability is a measure of the percentage of pupils who were admitted to the school at the standard time of

admission. The stability percentage is calculated by dividing the number of pupils who meet the stability criteria by the number of all eligible pupils (pupils in Years 1 to 11 with a single or main dual registration at the school at the time of the January school census). The stability measure is not available for school sixth forms.

Information regarding the level of deprivation in the school's location is provided, along with aggregated pupil-derived deprivation indicators at school, sixth form (where applicable) and local area level. Each deprivation indicator is based on the English indices of deprivation from 2025.

You can read further information about the [data used for the local area deprivation](https://www.gov.uk/government/statistics/english-indices-of-deprivation-2025) (<https://www.gov.uk/government/statistics/english-indices-of-deprivation-2025>). For deprivation measures, 'Above average' means "more deprived" and 'Below average' means "less deprived".

There is additional [guidance](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#school-characteristics) (<https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#school-characteristics>) about this section.

Ethnicity

Data source: the DfE’s January school census for 2025

▼ Guidance

The chart displays the ethnic groups within the whole school. There are 17 possible ethnic groups. In addition, ‘Any other ethnic group’ is displayed.

The whole school measure includes all year groups in the school.

If the school has a sixth form, a separate ethnicity chart will be displayed.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#ethnicity\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#ethnicity) about this section.

Whole school

► Table

SEN

Data source: the DfE’s January school census for 2025 and the DfE’s GIAS service

▼ [Guidance](#)

The table displays the number of pupils in the school, by year group, who have special educational needs (SEN) and the primary need category. The 2 halves of the table represent pupils who have SEN support and pupils who have an education, health and care (EHC) plan.

No highlighting is applied to this table; figures are presented purely for information.

The text above the table displays if the school has any resourced provision. This could be a SEN unit, resourced provision or both. The capacity represents how many pupils the provision displayed can accommodate. The type of SEN provision lists, where applicable, the type of SEN that is provided for. This section also displays how many pupils with SEN have received free school meals at any time during the last 6 years and/or who are looked-after children (in the care of the local authority for a day or more or who have been adopted from care).

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#sen\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#sen) about this section.

Type of resourced provision: No resourced provision
Capacity:
Type of SEN provision:
Number of pupils with SEN who are also FSM6 and/or CLA: 4

Year group totals	0	1	1	1	2	1	0	6

Year group

Data source: the DfE's January school census for 2025, children in need census for 2024 and children looked after return for 2024

▼ [Guidance](#)

This table shows information about pupil characteristics for each year group.

The table presents data for pupils who were recorded as part of the previous January school census. As such, the data presented against each year group is about the cohort that was in that year group in the last academic year. For example, the data in the Year 7 column is about the cohort who were in Year 7 in the previous academic year, not the cohort who are in Year 7 in the current academic year.

The measures included in the table are:

- the number of pupils on roll
- the percentage of pupils in receipt of free school meals (FSM) at the time of the census; these pupils are those who are or have been eligible for FSM and have claimed them, during Reception to Year 11, sometime in the last 6 years (FSM data is not collected for sixth forms)
- the percentage of pupils whose first language is not English or is believed to be other than English
- the number of pupils identified as young carers
- the number of pupils who are children in need, including children on child protection plans and looked-after children – this includes children who have child-in-need plans and other types of plans or arrangements, and children waiting for a referral to be considered, an assessment to start, or an assessment that has started to be completed. These are pupils who were a child in need at any point during the reporting year, e.g. IDSRs using the January 2025 school census will show children in need between 1 April 2023 and 31 March 2024 inclusive.
- the number of looked-after children – these are pupils who were looked after for at least one day during the reporting year and were aged 4 to 15 at 31 August; this excludes looked-after children under an agreed series of short placements and those who were on remand/committed for trial or sentence and accommodated by the local authority. IDSRs using the January 2025 school census will show children who were looked after between 1 April 2023 and 31 March 2024 inclusive.

No highlighting is applied to this table; figures are presented for information only.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#year-group\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#year-group) about this section.

	Number on roll	% FSM6	% EAL	Number young carers	Number CIN	Number CLA
Reception	28	0.00	10.70	0	0	0
Year 1	28	17.86	3.60	0	2	1
Year 2	28	3.57	3.60	0	1	0
Year 3	27	11.11	0.00	1	1	1
Year 4	29	0.00	0.00	0	0	0
Year 5	25	12.00	4.00	0	1	0

[Back to contents](#)

Staffing

Data source: the DfE’s November 2024, 2023, 2022 and 2021 school workforce census data

▼ [Guidance](#)

This section presents information on several areas relating to staffing.

The areas covered are:

- the proportion of education support staff relative to teaching staff
- teacher absence
- staff retention

Information on staff turnover is calculated using the number of full-time equivalent (FTE) turnover leavers and the total FTE staff at the school. A school is considered to have high staff turnover if its turnover rate was in the highest 20% in any of the previous 3 years. Low staff turnover is not highlighted. Special schools are compared with primaries.

Turnover and leavers at a school level can be very volatile from year to year. When looking at rates of leavers and turnover, it is important to consider school size, because this has a particularly big impact on turnover rates for small schools.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#staffing\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#staffing) about this section.

- *There is nothing to highlight for the proportion of education support staff relative to teaching staff in 2024.*
- *There is nothing to highlight for teachers with at least one period of sickness absence.*
- *There is nothing to highlight for days lost to teacher absence (4 days) in 2023/24.*
- At the time of the November 2024 census, there were no full-time vacant teacher posts in the school.
- Staff turnover was in the highest 20% in: 2021.

[Back to contents](#)

Attendance and behaviour

Attendance and persistent absence

Data source: the DfE's 2024/25 (2 term), 2023/24 (3 term), 2022/23 (3 term) and 2018/19 (3 term) academic year data from the 'Pupil absence in schools in England' statistical release series

▼ [Guidance](#)

This section contains tables and charts for overall attendance and persistent absence, which provide data for the school and a comparison with the national average. To compare the school value with the national average, we have calculated standard deviations (SDs) and confidence intervals (CIs). CIs are used for persistent absence only.

The overall attendance and persistent absence measures are calculated only for those pupils who are of compulsory age - i.e. aged between 5 and 15 at the start of the academic year (31 August).

Each set of tables and charts is available for 3 different pupil groups within the cohort of pupils of compulsory school age:

- all pupils enrolled at the school
- free school meals (FSM) pupils: those who have been eligible for FSM at any time during the last 6 years – referred to as FSM6
- pupils who have a statement of special educational needs (SEN) or an education, health and care (EHC) plan, or who receive SEN support but do not have an EHC plan

This section includes data for 2018/19 because, nationally, attendance declined sharply in 2020/21 during the COVID-19 pandemic and has not recovered. Inclusion of 2018/19 data will show whether the school has managed to return to pre-pandemic attendance levels.

Overall attendance is calculated as: $100 - ((\text{number of absence sessions} / \text{number of sessions it was})$

possible to attend) * 100). Absence is the total of all authorised and unauthorised absences.

Schools are compared with other schools in the same phase of education: primary (including middle deemed primary) or secondary (including middle deemed secondary and all-through schools). Special schools are compared against the national distribution for secondary schools.

The national distribution banding shows how the school's rate compares with the national rate. For overall attendance, if the school's rate is more than 0.5 SDs above the national rate, it is classed as 'Above' and highlighted in green. If the school's rate is more than 0.5 SDs below the national rate, it is classed as 'Below' and highlighted in red. Otherwise it is 'Close to average' and shown in grey. Due to the methodology used to calculate overall attendance, this banding does not indicate statistical significance. For persistent absence it is calculated differently, as it uses both the SD and a CI to indicate whether the school's persistent absence rate is, statistically, significantly above or below the national average. School values that are more than 0.5 SDs above the national rate and significantly above average – Above (sig+) – are highlighted red. School values that are more than 0.5 SDs below the national rate and significantly below average – Below (sig-) – are highlighted green. All other values are shown in grey.

Overall attendance trend shows whether the school trend is in line with the national trend, or if the school's attendance has improved or declined relative to the national change. Persistent absence trend indicates whether there has been a statistically significant increase or decrease in the school's persistent absence rate in a particular year, compared with the previous year. The year 3 rate is compared with 2018/19 to illustrate how persistent absence has changed since the COVID-19 pandemic.

The school context column indicates whether the whole school has a higher-than-average proportion of students who have been eligible for FSM at any time during the last 6 years (FSM6), or a higher-than-average proportion of pupils with SEN (including those who receive SEN support, or who have a statement of SEN or an EHC plan).

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#attendance-and-persistent-absence\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#attendance-and-persistent-absence) about this section.

► [Key to charts](#)

— [Attendance](#)

— [Persistent absence](#)

Attendance

The trend analysis for the Attendance measure is different to the trend analysis elsewhere in the IDSR. For Attendance, our trend analysis compares the school trend with the national trend and determines whether it is in line with it or whether the school trend is showing either relative improvement or relative decline.

All pupils - Attendance

Year	Cohort	School	National	National distribution banding	Sch trend vs Nat trend	School context
2024/25 (2 term)	172	95.2%	94.8%	Close to average	Relative decline	-

Suspensions and permanent exclusions - whole school

Data source: the DfE's 2024/25 (1 term), 2023/24 (3 term) and 2022/23 (3 term) academic year data

▼ Guidance

This section contains tables and charts for suspensions and permanent exclusions. These provide data for the school and a comparison with the national average.

The number and proportion of pupils who have had suspensions or permanent exclusions in a school are often very small, especially in primary schools. These figures should be interpreted with caution, particularly when making comparisons over time. The suspensions and permanent exclusions data can be up to one year behind and therefore may not relate to the same cohort as other IDSR data.

The whole school measure includes all year groups in the school.

This section contains tables and charts displaying information about pupils who have had one or more suspensions and pupils who have had two or more suspensions, for the most recent 3 years for which data is available.

Each set of tables and charts is available for 3 different pupil groups:

- all pupils enrolled at the school
- free school meals (FSM) pupils: those who have been eligible for FSM at any time during the last 6 years – referred to as FSM6
- pupils who have a statement of special educational needs (SEN) or an education, health and care (EHC) plan, or who receive SEN support but do not have an EHC plan

To compare the school's data with the national average, we have calculated standard deviations (SDs) and confidence intervals (CIs).

Schools are compared with other schools in the same phase of education: primary (including middle deemed primary) or secondary (including middle deemed secondary and all-through schools). Special schools are compared against the national distribution for secondary schools.

The national distribution banding shows how the school's rate compares with the national rate. This comparison uses both the SD and a CI to indicate whether the school's suspension rate is, statistically, significantly above or below the national average. School values that are more than 0.5 SDs above the national rate and significantly above average – Above (sig+) – are highlighted red. School values that are more than 0.5 SDs below the national rate and significantly below average – Below (sig-) – are highlighted green. All other values are shown in grey.

Trend indicates whether there has been a statistically significant increase or decrease in the school's suspension rate in a particular year, compared with the previous year.

The school context column indicates whether the whole school has a higher-than-average proportion of pupils who have been eligible for FSM at any time during the last 6 years (FSM6), or a higher-than-average proportion of pupils with SEN (including those who receive SEN support, or who have a statement of SEN or an EHC plan).

Suspension rate data is positively skewed, especially for primary schools, because many schools have a very low suspension rate. However, a small number of schools have a higher rate, so there is a long above-the-national-average section, but only approximately a quarter of schools fall into this band. Some of these high rates may be due to errors in the source data.

Reasons for suspensions and permanent exclusions are for the most recent 3 years available and they will only be displayed if there has been at least 1 suspension or permanent exclusion in at least 1 of those years. Up to 3 reasons can be recorded. These reasons are recorded without weighting or prioritisation. Therefore, the total number of reasons may exceed the total number of suspensions or permanent exclusions. Reasons are recorded with a '-' for 2024/25 (1 term) as that data is not yet available.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#suspensions-and-permanent-exclusions\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#suspensions-and-permanent-exclusions) about this section.

Links to alternative provision and other providers

Data source: the DfE’s summer term 2025 alternative provision placements data

▼ [Guidance](#)

The table shows information about alternative provision placements. This section will appear for all schools that submitted information on alternative provision placements in the latest data.

The placements include alternative provision, companies, providers registered with the UK Register of Learning Providers, further education and other schools.

The total number of pupils is shown, as well as the number of pupils attending full time and part time. Numbers in brackets are additional pupils who were attending the alternative provision but left during the census period.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#links-to-alternative-provision-and-other-providers\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#links-to-alternative-provision-and-other-providers) about this section.

Achievement in phonics and at key stage 2

Summary of attainment measures

Key stage 2 data source: the DfE's revised 2025, final 2024, final 2023 and final 2022 data

Phonics and MTC data source: the DfE's final 2025, final 2024 and final 2023 data

The 2022 outcomes may reflect residual impacts of the COVID-19 pandemic, including disrupted learning and attendance, which could affect pupil performance and school-level results, so comparisons with later years should take this into account.

▼ [Guidance](#)

These charts summarise school performance compared to the national average across all phonics and key stage 2 attainment measures in the report. Summaries are provided for all pupils, for disadvantaged pupils and for low/middle/high prior attainers.

In the 'Multi-year average' charts, the school's measures are grouped by the relative performance (banding) of their multi-year average; in the 'Individual years' charts, this grouping is initially based on the latest year and is then further grouped to indicate whether that banding outcome was observed in the latest year only, or whether it has been sustained for the last 2 years or last 3 years.

Where the school's outcome for a measure for the multi-year average or, in the case of individual years, for the latest year was either in the 'Below' band and, statistically, significantly below the national value or in the 'Above' band and, statistically, significantly above the national value, this is indicated on the chart through colour and asterisk (*) markers on either side of the measure's name.

Measures have been grouped by significance, so those measures that are statistically significant appear towards the top of the bars in the 'Below' and 'Above' bandings. Bold formatting is used to highlight the names of the headline measures, which are:

- % RWM ES – key stage 2 RWM meeting the expected standard
- % RWM HS – key stage 2 RWM achieving the higher standard

Attainment measures for low/middle/high prior attainers are only available for a maximum of 2 data years, so you will never see the prefix '3ya' in the 'Multi-year average' chart for these groups. Neither will there be bars labelled 'Last 3 years' in the 'Individual years' chart for these groups. Additionally, the years of data that are referred to as 'Latest year' and 'Last 2 years' in the 'Individual years' chart will differ from most other measures.

We do not produce breakdowns by pupil group of the measures of phonics Year 1 meeting the expected standard, the Year 4 MTC score, or any Key Stage 2 attainment measures for pupils achieving the higher standard/greater depth, so these measures will never appear on any of the summary charts outside the 'All pupils' tab.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2) about this section.

All pupils

Multi-year average

The chart below summarises school performance compared to national across all attainment measures in this report. The school's measures are grouped by the relative performance of their multi-year average for each measure, where available.

The chart is accompanied by a table which provides some information about cohort size for each type of measure. The key stage 2 (Year 6) cohort uses the cohort for reading, writing and mathematics. We do not analyse the relative performance where cohorts have fewer than 6 pupils, so any measures where this applies will not be shown in the chart.

Year	Key stage 2 (Year 6) cohort	MTC (Year 4) cohort	Phonics (Year 1) cohort
2025, 2024, 2023	83	79	82

Individual years

The chart below summarises school performance compared to national across all attainment measures in this report. The school's measures are grouped by their relative performance in the latest year, and further divided to show whether that level of performance was observed in the latest year only, or if it has been sustained for the last 2 or 3 years.

The chart is accompanied by a table which provides some information about cohort size and characteristics for each type of measure. The key stage 2 (Year 6) cohort uses the cohort for reading, writing and mathematics. We do not analyse the relative performance where cohorts have fewer than 6 pupils, so any measures where this applies will not be shown in the chart.

Year	Key stage 2 (Year 6)		MTC (Year 4)		Phonics (Year 1)

Reading, writing and mathematics

Data source: the DfE's revised 2025, final 2024, final 2023 and final 2022 data

The 2022 outcomes may reflect residual impacts of the COVID-19 pandemic, including disrupted learning and attendance, which could affect pupil performance and school-level results, so comparisons with later years should take this into account.

▼ [Guidance](#)

This section contains tables and charts for reading, writing and mathematics attainment measures, which provide data for the school and a comparison with the national average. To compare the school value with the national average, we have calculated standard deviations (SDs) and confidence intervals.

Where possible, data is presented for the most recent 3 years and is provided separately to cover all pupils, disadvantaged pupils and low/middle/high prior attainers.

Data for the higher standard measure is presented for all pupils only.

Data for prior attainment groups is presented for 2023 and 2022 only as pupils reaching the end of key stage 2 in the most recent 2 data years did not sit their key stage 1 assessments due to COVID-19 disruption.

Wherever possible, we have averaged school and national results across data years to produce a multi-year average. We calculate either a 3-year or 2-year average depending on the national availability of data for each measure and pupil group combination. This helps us smooth out year-to-year fluctuations in the data so we can spot genuine trends and significant patterns that might otherwise be hidden. This is particularly important in small schools, where a single pupil's outcome can disproportionately affect the data.

A school's position on the national distribution is determined using SDs. 'Above' indicates when a school's value is more than 0.5 SDs above the national value. 'Below' indicates when a school's value is more than 0.5 SDs below the national value. All other school values are 'Close to average'.

Combining the school value's position within the national distribution and a measure of statistical confidence in the school value, there are 7 possible interpretations of school performance (the national distribution banding). These are:

- Above (sig+)
- Above (non-sig)
- Close to average (sig+)
- Close to average (non-sig)
- Close to average (sig-)
- Below (non-sig)
- Below (sig-)

When school values fall into the 'Close to average' banding, or they are not, statistically, significantly different from national (non-sig), the national distribution banding will be coloured grey. When school values fall into the 'Above' banding and are, statistically, significantly above the national value, it will be highlighted in green. When school values fall into the 'Below' banding and are, statistically, significantly below the national value, it will be highlighted in red.

Trend shows whether there has been a statistically significant increase or decrease in the school's value in a particular year, compared with the previous year. Trends are not available for the furthest year, as no comparator year is displayed. Trend is available for all pupils and low/middle/high prior attainers, but not for disadvantaged pupils.

For disadvantaged pupils, we display the percentage point gap between the school's disadvantaged pupils and the national non-disadvantaged pupils. The gap trend column indicates whether there has been a change in the gap in a particular year, compared with the previous year. If a school's disadvantaged group is outperforming the national non-disadvantaged group, the trend will be identified as 'Positive gap'. If a school's disadvantaged group is performing in line with the national non-disadvantaged group, the trend will be identified as 'No gap'. If the gap in a particular year is larger than in the previous year the trend will be identified as 'Widening'. If the gap in a particular year is smaller than in the previous year the trend will be identified as 'Narrowing'. Otherwise, the trend will be identified as 'No change'.

The year group context column indicates whether the relevant year group has a high proportion of pupils who are or have been eligible for free school meals (FSM) and have claimed them at some time in the last 6 years (FSM6), or have high special educational needs (SEN) or low stability. Key stage 2 measures use Year 6 cohort characteristics. For each measure and data year combination, the context stated will be the same in every table, regardless of which pupil group the table represents more generally. This is because the year group context column describes the context for all pupils within the relevant year group, rather than the context for the subset of the year group represented in the disadvantaged or low/middle/high prior attainers table.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2) about this section.

Reading

Data source: the DfE's revised 2025, final 2024, final 2023 and final 2022 data

The 2022 outcomes may reflect residual impacts of the COVID-19 pandemic, including disrupted learning and attendance, which could affect pupil performance and school-level results, so comparisons with later years should take this into account.

▼ Guidance

This section contains tables and charts for reading attainment and progress measures, which provide data for the school and a comparison with the national average. To compare the school value with the national average, we have calculated standard deviations (SDs) and confidence intervals.

Where possible, data is presented for the most recent 3 years and is provided separately to cover all pupils, disadvantaged pupils and low/middle/high prior attainers.

Data for the higher standard measure is presented for all pupils only.

Data for prior attainment groups and for the progress measure is presented for 2023 and 2022 only as pupils reaching the end of key stage 2 in the most recent 2 data years did not sit their key stage 1 assessments due to COVID-19 disruption.

Wherever possible, we have averaged school and national results across data years to produce a multi-year average. We calculate either a 3-year or 2-year average depending on the national availability of data for each measure and pupil group combination. This helps us smooth out year-to-year fluctuations in the data so we can spot genuine trends and significant patterns that might otherwise be hidden. This is particularly important in small schools, where a single pupil's outcome can disproportionately affect the data.

A school's position on the national distribution is determined using SDs. 'Above' indicates when a school's value is more than 0.5 SDs above the national value. 'Below' indicates when a school's value is more than 0.5 SDs below the national value. All other school values are 'Close to average'.

Combining the school value's position within the national distribution and a measure of statistical confidence in the school value, there are 7 possible interpretations of school performance (the national distribution banding). These are:

- Above (sig+)
- Above (non-sig)
- Close to average (sig+)
- Close to average (non-sig)
- Close to average (sig-)
- Below (non-sig)
- Below (sig-)

When school values fall into the 'Close to average' banding, or they are not, statistically, significantly different from national (non-sig), the national distribution banding will be coloured grey. When school values fall into the 'Above' banding and are, statistically, significantly above the national value, it will be highlighted in green. When school values fall into the 'Below' banding and are, statistically, significantly below the national value, it will be highlighted in red.

Trend shows whether there has been a statistically significant increase or decrease in the school's value in a particular year, compared with the previous year. Trends are not available for the furthest year, as no comparator year is displayed. Trend is available for all pupils and low/middle/high prior attainers, but not for disadvantaged pupils.

For disadvantaged pupils, we display the percentage point gap between the school's disadvantaged pupils and the national non-disadvantaged pupils. The gap trend column indicates whether there has been a change in the gap in a particular year, compared with the previous year. If a school's disadvantaged group is outperforming the national non-disadvantaged group, the trend will be identified as 'Positive gap'. If a school's disadvantaged group is performing in line with the national non-disadvantaged group, the trend will be identified as 'No gap'. If the gap in a particular year is larger than in the previous year the trend will be identified as 'Widening'. If the gap in a particular year is smaller than in the previous year the trend will be identified as 'Narrowing'. Otherwise, the trend will be identified as 'No change'.

The year group context column indicates whether the relevant year group has a high proportion of pupils who are or have been eligible for free school meals (FSM) and have claimed them at some time in the last 6 years (FSM6), or have high special educational needs (SEN) or low stability. Key stage 2 measures use Year 6 cohort characteristics. For each measure and data year combination, the context stated will be the same in every table, regardless of which pupil group the table represents more generally. This is because the year group context column describes the context for all pupils within the relevant year group, rather than the context for the subset of the year group represented in the disadvantaged or low/middle/high prior attainers table.

EGPS

Data source: the DfE's revised 2025, final 2024, final 2023 and final 2022 data

The 2022 outcomes may reflect residual impacts of the COVID-19 pandemic, including disrupted learning and attendance, which could affect pupil performance and school-level results, so comparisons with later years should take this into account.

▼ Guidance

This section contains tables and charts for EGPS attainment measures, which provide data for the school and a comparison with the national average. To compare the school value with the national average, we have calculated standard deviations (SDs) and confidence intervals.

Where possible, data is presented for the most recent 3 years and is provided separately to cover all pupils, disadvantaged pupils and low/middle/high prior attainers.

Data for the higher standard measure is presented for all pupils only.

Data for prior attainment groups is presented for 2023 and 2022 only as pupils reaching the end of key stage 2 in the most recent 2 data years did not sit their key stage 1 assessments due to COVID-19 disruption.

Wherever possible, we have averaged school and national results across data years to produce a multi-year average. We calculate either a 3-year or 2-year average depending on the national availability of data for each measure and pupil group combination. This helps us smooth out year-to-year fluctuations in the data so we can spot genuine trends and significant patterns that might otherwise be hidden. This is particularly important in small schools, where a single pupil's outcome can disproportionately affect the data.

A school's position on the national distribution is determined using SDs. 'Above' indicates when a school's value is more than 0.5 SDs above the national value. 'Below' indicates when a school's value is more than 0.5 SDs below the national value. All other school values are 'Close to average'.

Combining the school value's position within the national distribution and a measure of statistical confidence in the school value, there are 7 possible interpretations of school performance (the national distribution banding). These are:

- Above (sig+)

- Above (non-sig)
- Close to average (sig+)
- Close to average (non-sig)
- Close to average (sig-)
- Below (non-sig)
- Below (sig-)

When school values fall into the 'Close to average' banding, or they are not, statistically, significantly different from national (non-sig), the national distribution banding will be coloured grey. When school values fall into the 'Above' banding and are, statistically, significantly above the national value, it will be highlighted in green. When school values fall into the 'Below' banding and are, statistically, significantly below the national value, it will be highlighted in red.

Trend shows whether there has been a statistically significant increase or decrease in the school's value in a particular year, compared with the previous year. Trends are not available for the furthest year, as no comparator year is displayed. Trend is available for all pupils and low/middle/high prior attainers, but not for disadvantaged pupils.

For disadvantaged pupils, we display the percentage point gap between the school's disadvantaged pupils and the national non-disadvantaged pupils. The gap trend column indicates whether there has been a change in the gap in a particular year, compared with the previous year. If a school's disadvantaged group is outperforming the national non-disadvantaged group, the trend will be identified as 'Positive gap'. If a school's disadvantaged group is performing in line with the national non-disadvantaged group, the trend will be identified as 'No gap'. If the gap in a particular year is larger than in the previous year the trend will be identified as 'Widening'. If the gap in a particular year is smaller than in the previous year the trend will be identified as 'Narrowing'. Otherwise, the trend will be identified as 'No change'.

The year group context column indicates whether the relevant year group has a high proportion of pupils who are or have been eligible for free school meals (FSM) and have claimed them at some time in the last 6 years (FSM6), or have high special educational needs (SEN) or low stability. Key stage 2 measures use Year 6 cohort characteristics. For each measure and data year combination, the context stated will be the same in every table, regardless of which pupil group the table represents more generally. This is because the year group context column describes the context for all pupils within the relevant year group, rather than the context for the subset of the year group represented in the disadvantaged or low/middle/high prior attainers table.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2) about this section.

Phonics screening check expected standard

Data source: the DfE's final 2025, final 2024 and final 2023 data

▼ Guidance

This section contains a table and chart for the Year 1 phonics attainment measure, and sentences for both Year 1 and Year 2 phonics, which provide data for the school and a comparison with the national average. To compare the school value with the national average, we have calculated standard deviations (SDs) and confidence intervals.

Data is presented for the most recent 3 years and is provided for all pupils only.

We have averaged school and national results across data years to produce a 3-year average. This helps us smooth out year-to-year fluctuations in the data so we can spot genuine trends and significant patterns that might otherwise be hidden. This is particularly important in small schools, where a single pupil's outcome can disproportionately affect the data.

A school's position on the national distribution is determined using SDs. 'Above' indicates when a school's value is more than 0.5 SDs above the national value. 'Below' indicates when a school's value is more than 0.5 SDs below the national value. All other school values are 'Close to average'.

Combining the school value's position within the national distribution and a measure of statistical confidence in the school value, there are 7 possible interpretations of school performance (the national distribution banding). These are:

- Above (sig+)
- Above (non-sig)
- Close to average (sig+)
- Close to average (non-sig)
- Close to average (sig-)
- Below (non-sig)
- Below (sig-)

When school values fall into the 'Close to average' banding, or they are not, statistically, significantly different from national (non-sig), the national distribution banding will be coloured grey. When school values fall into the 'Above' banding and are, statistically, significantly above the national value, it will be highlighted in green. When school values fall into the 'Below' banding and are, statistically, significantly below the national value, it will be highlighted in red.

Trend shows whether there has been a statistically significant increase or decrease in the school's value in a particular year, compared with the previous year. Trends are not available for the furthest year, as no comparator year is displayed.

The year group context column indicates whether the relevant year group has a high proportion of pupils who are or have been eligible for free school meals (FSM) and have claimed them at some time in the last 6 years (FSM6), or have high special educational needs (SEN) or low stability. The phonics measure uses Year 1 cohort characteristics.

The sentences show:

- the total number of pupils who were eligible to be screened for phonics
- the number of pupils who sat the check, and who did not, where applicable
- the number of pupils who did not meet the expected standard, where applicable
- the average mark for pupils who did not meet the expected standard (where the number not meeting the standard was greater than 5)

The number of pupils who did not sit the phonics screening check includes (where applicable): the number who were absent, the number who were disapplied, and the number for whom there was maladministration.

There is additional [guidance \(https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2\)](https://www.gov.uk/guidance/school-inspection-data-summary-report-idsr-guide#achievement-in-phonics-and-at-key-stage-2) about this section.

► [Key to charts](#)

All pupils - Phonics expected standard

- There were 27 pupils who were eligible for the phonics screening check in Year 1 in 2025; all of them sat the check and 7 pupils did not meet the **phonics expected standard**. The average mark for those not meeting the standard was 23.
- No pupils were screened for phonics in Year 2 in 2025.
